

• Available for Senior QA Roles • Pune, India

Senior QA Engineer

5+ Years | AI-Enhanced Automation

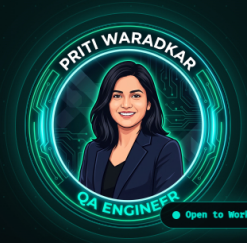

Delivering bug-free software across [web](#), [mobile](#) & [API](#). I leverage AI + Selenium to catch defects **30% faster**.

- ✓ 0 Escaped Defects | 247+ Tests Automated
- ✓ 5+ Years Web / Mobile / API Testing Expertise
- ✓ AI-Driven Test Design (ChatGPT, Gemini Integration)

About Me

I'm **Priti Waradkar**, a dedicated Senior QA Engineer with **5+ years of expertise** in manual and automation testing across web, mobile, and wearable devices.

Skilled in **Selenium with Java**, **Appium**, **BDD Cucumber**, **API testing**, **CI/CD pipelines** and Agile methodology. I have a proven ability to lead teams, deliver quality software, and integrate modern test automation frameworks to enhance efficiency and coverage.

I leverage **AI tools like ChatGPT and Gemini** to generate BDD scenarios, create test cases, and write Selenium scripts faster — reducing test design time by approximately **30%** and improving coverage.

"Quality is not an act, it is a habit – and I make sure every bug gets caught before production."

MCA – Master of Computer Applications

Computer Science • 2018-2020

// qa_philosophy

Shift-Left Testing

Catch issues early in the SDLC before they become costly production bugs.

Quality-First Mindset

Every feature ships only after rigorous validation across all test dimensions.

Zero Defect Culture

0 escaped defects to production — the only acceptable standard.

Work Experience

Sr. QA Engineer

Current

SKO Systems

Jul 2024 - Present Pune

- Reduced test case preparation time by ~30% using AI tools (ChatGPT)
- Mentored 2-member automation team, improving delivery consistency

- Participated in Agile ceremonies — Scrum, sprint planning, retrospectives
- Designed, automated & executed test cases using Selenium, Appium, TestNG, Cucumber
- Managed defects via Azure DevOps, collaborating with developers for closure
- Performed API testing (Postman, Rest Assured) and SQL database validations
- Conducted mobile app testing (manual + automation) for Android & tablets
- Leveraged AI tools (ChatGPT) to generate test scenarios, reducing design time by ~30%
- Mentored a 2-member automation team and provided product knowledge training

AI + QA = Faster, Smarter Testing

Integrating AI to achieve **30% faster test design**, smarter defect detection, and improved coverage.

30%

Faster Test Design

- ✓ Test case prep time significantly reduced
- ✓ Defect detection shifted left in SDLC
- ✓ Coverage improved with AI-generated edge cases
- ✓ AI-assisted automation script generation

AI Test Case Generation

ChatGPT • Gemini

ChatGPT & Gemini for AI-assisted test case generation with prompt engineering — reducing test design time by ~30%.

Automated Test Data

AI Driven

AI-driven test data creation for realistic, diverse, and edge-case datasets across complex test scenarios.

Defect Analysis & RCA

Root Cause AI

AI-based root cause identification — faster triage, smarter prioritization, and early detection.

Self-Healing Scripts

Self-Healing

Scripts that adapt to UI changes automatically, dramatically reducing maintenance overhead.

BDD Scenario Generation

Gherkin • BDD

ChatGPT/Gemini generates comprehensive Gherkin scenarios including edge cases and negative flows.

30% Faster Test Design

30% Reduction

AI tools reduce test case preparation time significantly, improving defect detection in early stages.
